

length: { 3, 5, 3, 1 } . what is max line in sequence upto 10?

4/08/26

1) Pseudo code :-

start
set text = "Data Structures and Algorithms"

get Pattern = "Algorithms"

Read Text, Pattern

Compare Pattern with text

if match

Display position

End for

stop

2) Sequential Search (unsuccessful)

start

Read Array, key

for each position

if key found

Display found

stop

End for

Display not found

stop

3) Sequential Search (2-D matrix)

start

Read matrix, key

for each row

for each Column

if key found

Display Row, column

stop

stop

④ Sequential search

Start

Read Array, key

for each element

if key found

Display position

stop

End for

stop

⑥ Sequential Search (Performance)

start

Read Array, keys

Search each key

Display Comparisons

Display Complexity

stop

⑧ Brute force

start

Read Text, Pattern

Display each Alignment

Display match / no match

stop

⑤ Brute force

start

Read Text, Pattern

Compare at each position

if match

Display first position

stop

⑦ Sequential Search (string)

start

Read Names, Search Name

Compare each Name

if match

Display position

stop

⑨ Sequential Search

start

Read Array, Key

for each element

if match

Display position

End for

Display Total count

stop

12) Start
Read Array, key
for each element
if Match
Display Position

End for
Display Total Count

Stop

13) Brute force

Start
Read Text, Pattern

Compare Characters

Count Comparisons

Count matches

Count mismatches

Display Results

Stop

14) Brute force (Case-Insensitive)

Start

Convert Text & Pattern to lowercase

Compare Pattern

Display Position

Stop

14) Successful & Unsuccessful

Start

Read Text, Pattern

Search Pattern

if found

Print "Successful"

Else

Print "Unsuccessful"

Stop

15) Display Every Alignment

Start

Read Text, Pattern

for each Position

Compare Pattern

Print Match/No match

End for

Stop

⑩ Comparison table

Start
Read Text, Pattern
for each Position
Compare characters
Count Comparison
Print Result
End for
Stop

⑪ Best, Average & Worst

Start
Read Text, Pattern
Search Pattern
Print Best case = $O(n)$

" $O(n^2)$
" $O(1)$

Stop

⑪ Shifting Process

Start
Read Text, Pattern
for each Shift
Display Shift
Compare Pattern
End for
Stop

⑫ Complete Brute force

Start
Read Text, Pattern
for each Position
Compare Pattern
if match
Print Position

End for

Print Comparison

Stop

⑬ Brute force

Start
Read Text, Pattern
Search Pattern
Count Comparison
Print $O(n)$
Print $O(n^2)$
Print $O(1)$
Stop
